
ambition-docs-guide Documentation

Release 0.1.1

Micah Hausler

July 24, 2014

1 Overview	3
2 Getting Started	5

This guide is meant for developers new to reStructuredText and Sphinx to quickly pick up key points for adding documentation to python code and projects.

Overview

`Sphinx` is a tool that generates documentation from `reStructuredText`. Output formats include HTML, pdf, epub, manpage, and many others.

`reStructuredText` is a markup language primarily for python documentation.

Getting Started

In all current Ambition app templates, there is now a `docs` folder in the root of the project, this is the source for Sphinx documentation.

Common reStructuredText and Sphinx commands will be documented here:

- [Python Docstrings](#)
- [Using Sphinx Autodoc](#)
- [Sphinx reStructuredText primer](#)
